Mr. Timothy A. Frazier, DFO
c/o Blue Ribbon Commission on
America's Nuclear Future
Co-Chairs Lee Hamilton and Brent Scowcroft
U.S. Department of Energy
1000 Independence Avenue, SW
Washington, DC 20585

Dear Chairmen Hamilton and Scowcroft:

GE Hitachi Nuclear Energy (GEH) appreciates you taking the leadership role in addressing the future of nuclear energy in our country. President Obama and Secretary Chu could not have chosen a better team to lead this important effort. We trust and believe that the members of the Commission have the depth of knowledge and experience to guide decisions in a direction that is most beneficial for the future of the country's nuclear energy program.

GEH has served the nuclear industry for over 50 years. Our years of experience serving and understanding the nuclear industry from both in the U.S. and abroad gives us a unique understanding of the challenges that face the Commission.

We request an opportunity to brief the full Commission on concepts and ideas that will address waste issues on both the front and back ends of the nuclear fuel cycle. From technology that can address the legacy depleted uranium tails to technology that turns used fuel into electricity, GEH has ideas that will certainly be of interest to the Commission.

Thank you for considering our request and please feel free to contact me if you have any questions relative to our briefing request or for additional information on fuel cycle issues.

Kind Regards,

Jack Fuller
President & CEO
GE Hitachi Nuclear Energy
